Application No.: 10/023,285

Office Action Dated: March 22, 2007

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently amended) A system to generate and deliver concentric user-targeted

content to participating users comprising:

a data store having data representative of a participating user's profile information

and/or data representative of said participating user's content usage information;

a content data store, said content data store having various content for display to said

participating user; and

an instruction set cooperating with said data store and said content data store,

wherein said instruction set operates on data from said data store to generate a

preference for said participating user, and

wherein said instruction set further operates on said generated preference to obtain a

range of concentric <u>user-targeted</u> content from said content data store such that said range of

content is correlated in varying degrees to said generated preference for said participating

user.

2. (Previously presented) The system as recited in claim 1, wherein said profile

information is input by said participating user for storage on said data store.

3. (Original) The system as recited in claim 2, wherein said profile information

comprises demographic and/or preference information for said participating user.

4. (Original) The system as recited in claim 1, wherein said usage information

comprises current and historical usage information.

5. (Previously presented) The system as recited in claim 1, wherein said instruction set

implements a matching algorithm, said matching algorithm accepting as input said data from

said data store and generating said preference.

Application No.: 10/023,285

Office Action Dated: March 22, 2007

6. (Previously presented) The system as recited in claim 5, wherein said matching algorithm accepts said preference and said content from said content data store as input to

generate said range of concentric content.

7. (Previously presented) The system as recited in claim 1, wherein said range of

concentric content comprises at least two differing content offerings.

8. (Original) The system as recited in claim 7, wherein said differing content offerings

differ from each other on a graduated basis.

9. (Original) The system as recited in claim 8, wherein said varying degrees are based

on said content usage information.

10. (Previously presented) The system as recited in claim 7, wherein said range of

concentric content comprises three differing concentric content offerings, said differing

concentric content offerings differing from each other on a graduated basis.

11. (Previously presented) The system as recited in claim 1, wherein said data store and

content data store operate in a computing environment.

12. (Previously presented) The system as recited in claim 11, wherein said instruction set

comprises a computing application.

13. (Previously presented) The system as recited in claim 12, wherein said range of

concentric content is delivered to said participating user over a communications network.

14. (Previously presented) The system as recited in claim 13, wherein said

communications network comprises any of a wireless LAN, a fixed wire LAN, a wireless

WAN, a fixed wire WAN, a wireless intranet, a fixed wire intranet, a wireless extranet, a

fixed wire extranet, a wireless peer-to-peer communications network, a fixed wire peer-to-

peer communications network, and the Internet.

Application No.: 10/023,285

Office Action Dated: March 22, 2007

15. (Original) The system as recited in claim 13, wherein said range of concentric

content is displayable in electronic display panes.

16. (Original) The system as recited in claim 15, wherein said electronic display panes

are part of a content browser computing application.

17. (Previously presented) A computer implemented method to generate concentric user-

targeted content for a participating user, comprising the steps of:

receiving user data from a data store having data indicative of a participating user's

profile information and/or data indicative of said participating user's content usage

information;

receiving content from a content data store;

generating a preference for said participating user based on said user data; and

matching said generated preference with said content to generate a range of concentric

user-targeted content that is matched to said generated preference for said participating user

with varying degrees of certainty.

18. (Previously presented) The method as recited in claim 17 further comprising the step

of:

distributing said range of concentric user-targeted content to said participating user

over a cooperating communications network.

19. (Previously presented) The method as recited in claim 17, wherein said matching step

comprises the step of:

applying a matching algorithm to said preference and said content.

20. (Previously presented) The method as recited in claim 17, further comprising the step

of:

communicating with a content partner to obtain additional content for use when

generating said range of concentric content.

Application No.: 10/023,285

Office Action Dated: March 22, 2007

21. (Original) A computer readable medium having computer readable instructions to perform the method as recited in claim 17.

22. (Previously presented) A method to generate and deliver concentric user-targeted content comprising the acts of:

providing a data store having data indicative of a participating user's profile information and/or data indicative of said participating user's content usage information;

providing a content data store, said content data store having content from a content service provider; and

providing a computing application, said computing application cooperating with said data store and said content data store to generate a preference from said profile information and said content usage information, wherein said computing application processes said preference along with said content to determine a range of concentric user-targeted content, said range of concentric user-targeted content including content levels differing on a graduated basis; and

delivering said generated range of concentric user-targeted content to said participating user over a communications network, said communications network cooperating with said computing application.

23. (Previously presented) The method as recited in claim 22, wherein said providing said content data store step further comprises cooperating with a content partner to obtain said content.
